Concrete (Published in 2012 by Phaidon)

Concrete takes a fresh look at the world's most versatile and abundant building material. Collating fascinating and beautiful concrete buildings by some of the most celebrated architects of the last century, it features familiar projects from Le Corbusier and Frank Lloyd Wright alongside work from some of the leading lights of contemporary architecture, including Zaha Hadid, Herzog & de Meuron, and many lesser-known newcomers.

Arranged to promote comparison and discussion, the selected projects take the reader on a global tour of inspiring and intriguing structures: a German skatepark sits beside an Italian rooftop test track, a Japanese crematorium alongside a Portuguese swimming pool, and a Brazilian government building next to a Chinese opera house.
