BUILDING CODE REQUIREMENTS FOR STRUCTURAL CONCRETE (ACI 318-05) AND COMMENTARY (ACI 318R-05)

REPORTED BY ACI COMMITTEE 318

PREFACE

The code portion of this document covers the design and construction of structural concrete used in buildings and where applicable in nonbuilding structures.

Among the subjects covered are: drawings and specifications; inspection; materials; durability requirements; concrete quality, mixing, and placing; formwork; embedded pipes; construction joints; reinforcement details; analysis and design; strength and serviceability; flexural and axial loads; shear and torsion; development and splices of reinforcement; slab systems; walls; footings; precast concrete; composite flexural members; prestressed concrete; shells and folded plate members; strength evaluation of existing structures; special provisions for seismic design; structural plain concrete; strut-and-tie modeling in Appendix A; alternative design provisions in Appendix B; alternative load and strength-reduction factors in Appendix C; and anchoring to concrete in Appendix D.

The quality and testing of materials used in construction are covered by reference to the appropriate ASTM standard specifications. Welding of reinforcement is covered by reference to the appropriate ANSI/AWS standard.

Uses of the code include adoption by reference in general building codes, and earlier editions have been widely used in this manner. The code is written in a format that allows such reference without change to its language. Therefore, background details or suggestions for carrying out the requirements or intent of the code portion cannot be included. The commentary is provided for this purpose. Some of the considerations of the committee in developing the code portion are discussed within the commentary, with emphasis given to the explanation of new or revised provisions. Much of the research data referenced in preparing the code is cited for the user desiring to study individual questions in greater detail. Other documents that provide suggestions for carrying out the requirements of the code are also cited.

Keywords: admixtures; aggregates; anchorage (structural); beam-column frame; beams (supports); **building codes**; cements; cold weather construction; columns (supports); combined stress; composite construction (concrete and steel); composite construction (concrete to concrete); compressive strength; **concrete construction**; **concretes**; concrete slabs; construction joints; continuity (structural); contraction joints; cover; curing; deep beams; deflections; drawings; earthquake resistant structures; embedded service ducts; flexural strength; floors; folded plates; footings; formwork (construction); frames; hot weather construction; inspection; isolation joints; joints (junctions); joists; lightweight concretes; loads (forces); load tests (structural); materials; mixing; mix proportioning; modulus of elasticity; moments; pipe columns; pipes (tubing); placing; plain concrete; precast concrete; prestressed concrete; prestressing steels; quality control; **reinforced concrete**; reinforcing steels; roofs; serviceability; shear strength; shearwalls; shells (structural forms); spans; specifications; splicing; strength; strength analysis; stresses; **structural analysis**; **structural concrete**; **structural design**; structural integrity; T-beams; torsion; walls; water; welded wire reinforcement.

ACI 318-05 was adopted as a standard of the American Concrete Institute October 27, 2004 to supersede ACI 318-02 in accordance with the Institute's standardization procedure.

A complete metric companion to ACI 318/318R has been developed, 318M/318RM; therefore no metric equivalents are included in this document.

ACI Committee Reports, Guides, Standard Practices, and Commentaries are intended for guidance in planning, designing, executing, and inspecting construction. This commentary is intended for the use of individuals who are competent to evaluate the significance and limitations of its content and recommendations and who will accept responsibility for the application of the material it contains. The American Concrete Institute disclaims any and all responsibility for the stated principles. The Institute shall not be liable for

any loss or damage arising therefrom. Reference to this commentary shall not be made in contract documents. If items found in this Commentary are desired by the Architect/Engineer to be a part of the contract documents, they shall be restated in mandatory language for incorporation by the Architect/Engineer.

CONTENTS

INTRODUCTION	7
CHAPTER 1—GENERAL REQUIREMENTS	9
1.1—Scope.....	9
1.2—Drawings and specifications	14
1.3—Inspection	15
1.4—Approval of special systems of design or construction	18
CHAPTER 2—NOTATION AND DEFINITIONS	19
2.1—Notation	19
2.2—Definitions	28
CHAPTER 3—MATERIALS	37
3.1—Tests of materials	37
3.2—Cements	37
3.3—Aggregates	38
3.4—Water	38
3.5—Steel reinforcement.....	39
3.6—Admixtures.....	43
3.7—Storage of materials.....	45
3.8—Referenced standards	45
CHAPTER 4—DURABILITY REQUIREMENTS	51
4.1—Water-cementitious material ratio	51
4.2—Freezing and thawing exposures.....	52
4.3—Sulfate exposures	53
4.4—Corrosion protection of reinforcement	54
CHAPTER 5—CONCRETE QUALITY, MIXING, AND PLACING	57
5.1—General.....	57
5.2—Selection of concrete proportions	58
5.3—Proportioning on the basis of field experience or trial mixtures, or both.....	58
5.4—Proportioning without field experience or trial mixtures.....	63
5.5—Average strength reduction	64
5.6—Evaluation and acceptance of concrete.....	64
5.7—Preparation of equipment and place of deposit.....	68
5.8—Mixing	69
5.9—Conveying.....	69
5.10—Depositing.....	70
5.11—Curing	71
5.12—Cold weather requirements.....	72
5.13—Hot weather requirements	72
CHAPTER 6—FORMWORK, EMBEDDED PIPES, AND CONSTRUCTION JOINTS.....	73
6.1—Design of formwork.....	73
6.2—Removal of forms, shores, and reshoring.....	73
6.3—Conduits and pipes embedded in concrete	75
6.4—Construction joints	76
CHAPTER 7—DETAILS OF REINFORCEMENT	79
7.1—Standard hooks.....	79
7.2—Minimum bend diameters	79
7.3—Bending.....	80
7.4—Surface conditions of reinforcement	81
7.5—Placing reinforcement.....	81

7.6—Spacing limits for reinforcement.....	82
7.7—Concrete protection for reinforcement	84
7.8—Special reinforcement details for columns	86
7.9—Connections.....	87
7.10—Lateral reinforcement for compression members	88
7.11—Lateral reinforcement for flexural members	90
7.12—Shrinkage and temperature reinforcement	90
7.13—Requirements for structural integrity	92
CHAPTER 8—ANALYSIS AND DESIGN—GENERAL CONSIDERATIONS	95
8.1—Design methods	95
8.2—Loading	95
8.3—Methods of analysis	96
8.4—Redistribution of negative moments in continuous flexural members	98
8.5—Modulus of elasticity.....	99
8.6—Stiffness	99
8.7—Span length.....	100
8.8—Columns.....	100
8.9—Arrangement of live load	100
8.10—T-beam construction	101
8.11—Joist construction	102
8.12—Separate floor finish	103
CHAPTER 9—STRENGTH AND SERVICEABILITY REQUIREMENTS.....	105
9.1—General	105
9.2—Required strength	105
9.3—Design strength.....	107
9.4—Design strength for reinforcement.....	110
9.5—Control of deflections	111
CHAPTER 10—FLEXURE AND AXIAL LOADS	119
10.1—Scope.....	119
10.2—Design assumptions.....	119
10.3—General principles and requirements	121
10.4—Distance between lateral supports of flexural members.....	124
10.5—Minimum reinforcement of flexural members.....	124
10.6—Distribution of flexural reinforcement in beams and one-way slabs.....	125
10.7—Deep beams.....	127
10.8—Design dimensions for compression members	128
10.9—Limits for reinforcement of compression members	128
10.10—Slenderness effects in compression members	130
10.11—Magnified moments—General	131
10.12—Magnified moments—Nonsway frames	133
10.13—Magnified moments—Sway frames	137
10.14—Axially loaded members supporting slab system	140
10.15—Transmission of column loads through floor system.....	141
10.16—Composite compression members	142
10.17—Bearing strength.....	144
CHAPTER 11—SHEAR AND TORSION	147
11.1—Shear strength	147
11.2—Lightweight concrete	150
11.3—Shear strength provided by concrete for nonprestressed members.....	151
11.4—Shear strength provided by concrete for prestressed members	153
11.5—Shear strength provided by shear reinforcement.....	156
11.6—Design for torsion.....	160
11.7—Shear-friction.....	171
11.8—Deep beams.....	175
11.9—Special provisions for brackets and corbels.....	176
11.10—Special provisions for walls.....	179

11.11—Transfer of moments to columns	181
11.12—Special provisions for slabs and footings.....	181
CHAPTER 12—DEVELOPMENT AND SPLICES OF REINFORCEMENT	193
12.1—Development of reinforcement—General	193
12.2—Development of deformed bars and deformed wire in tension	194
12.3—Development of deformed bars and deformed wire in compression	196
12.4—Development of bundled bars.....	197
12.5—Development of standard hooks in tension.....	197
12.6—Mechanical anchorage.....	200
12.7—Development of welded deformed wire reinforcement in tension	200
12.8—Development of welded plain wire reinforcement.....	201
12.9—Development of prestressing strand	201
12.10—Development of flexural reinforcement—General.....	203
12.11—Development of positive moment reinforcement	205
12.12—Development of negative moment reinforcement	207
12.13—Development of web reinforcement	208
12.14—Splices of reinforcement—General.....	211
12.15—Splices of deformed bars and deformed wire in tension.....	212
12.16—Splices of deformed bars in compression.....	214
12.17—Special splice requirements for columns	215
12.18—Splices of welded deformed wire reinforcement.....	217
12.19—Splices of welded plain wire reinforcement	218
CHAPTER 13—TWO-WAY SLAB SYSTEMS.....	219
13.1—Scope.....	219
13.2—Definitions	219
13.3—Slab reinforcement.....	220
13.4—Openings in slab systems.....	223
13.5—Design procedures.....	224
13.6—Direct design method.....	226
13.7—Equivalent frame method.....	233
CHAPTER 14—WALLS.....	237
14.1—Scope.....	237
14.2—General	237
14.3—Minimum reinforcement	238
14.4—Walls designed as compression members	239
14.5—Empirical design method	239
14.6—Nonbearing walls	240
14.7—Walls as grade beams	240
14.8—Alternative design of slender walls	241
CHAPTER 15—FOOTINGS.....	243
15.1—Scope.....	243
15.2—Loads and reactions	243
15.3—Footings supporting circular or regular polygon shaped columns or pedestals	244
15.4—Moment in footings	244
15.5—Shear in footings.....	245
15.6—Development of reinforcement in footings	246
15.7—Minimum footing depth	246
15.8—Transfer of force at base of column, wall, or reinforced pedestal	246
15.9—Sloped or stepped footings	249
15.10—Combined footings and mats.....	249
CHAPTER 16—PRECAST CONCRETE	251
16.1—Scope.....	251
16.2—General	251
16.3—Distribution of forces among members	252

16.4—Member design	252
16.5—Structural integrity	253
16.6—Connection and bearing design	255
16.7—Items embedded after concrete placement.....	257
16.8—Marking and identification	257
16.9—Handling.....	257
16.10—Strength evaluation of precast construction.....	257
CHAPTER 17—COMPOSITE CONCRETE FLEXURAL MEMBERS.....	259
17.1—Scope	259
17.2—General	259
17.3—Shoring.....	260
17.4—Vertical shear strength	260
17.5—Horizontal shear strength.....	260
17.6—Ties for horizontal shear	261
CHAPTER 18—PRESTRESSED CONCRETE.....	263
18.1—Scope	263
18.2—General	264
18.3—Design assumptions.....	265
18.4—Serviceability requirements—Flexural members	266
18.5—Permissible stresses in prestressing steel	269
18.6—Loss of prestress.....	269
18.7—Flexural strength	271
18.8—Limits for reinforcement of flexural members.....	272
18.9—Minimum bonded reinforcement	273
18.10—Statically indeterminate structures	275
18.11—Compression members—Combined flexure and axial loads	276
18.12—Slab systems.....	276
18.13—Post-tensioned tendon anchorage zones	278
18.14—Design of anchorage zones for monostrand or single 5/8 in. diameter bar tendons.....	283
18.15—Design of anchorage zones for multistrand tendons.....	284
18.16—Corrosion protection for unbonded tendons	284
18.17—Post-tensioning ducts.....	285
18.18—Grout for bonded tendons	285
18.19—Protection for prestressing steel	286
18.20—Application and measurement of prestressing force.....	287
18.21—Post-tensioning anchorages and couplers.....	287
18.22—External post-tensioning	288
CHAPTER 19—SHELLS AND FOLDED PLATE MEMBERS.....	291
19.1—Scope and definitions.....	291
19.2—Analysis and design	293
19.3—Design strength of materials	295
19.4—Shell reinforcement	295
19.5—Construction	297
CHAPTER 20—STRENGTH EVALUATION OF EXISTING STRUCTURES	299
20.1—Strength evaluation—General.....	299
20.2—Determination of required dimensions and material properties	300
20.3—Load test procedure	301
20.4—Loading criteria	301
20.5—Acceptance criteria	302
20.6—Provision for lower load rating.....	304
20.7—Safety.....	304
CHAPTER 21—SPECIAL PROVISIONS FOR SEISMIC DESIGN.....	305
21.1—Definitions	305
21.2—General requirements	307

21.3—Flexural members of special moment frames	312
21.4—Special moment frame members subjected to bending and axial load	315
21.5—Joints of special moment frames	320
21.6—Special moment frames constructed using precast concrete	322
21.7—Special reinforced concrete structural walls and coupling beams	324
21.8—Special structural walls constructed using precast concrete	330
21.9—Special diaphragms and trusses.....	330
21.10—Foundations	333
21.11—Members not designated as part of the lateral-force-resisting system	336
21.12—Requirements for intermediate moment frames	338
21.13—Intermediate precast structural walls	342
CHAPTER 22—STRUCTURAL PLAIN CONCRETE	343
22.1—Scope.....	343
22.2—Limitations.....	343
22.3—Joints	344
22.4—Design method.....	344
22.5—Strength design.....	345
22.6—Walls	347
22.7—Footings	348
22.8—Pedestals	350
22.9—Precast members.....	350
22.10—Plain concrete in earthquake-resisting structures.....	350
APPENDIX A—STRUT-AND-TIE MODELS	353
A.1—Definitions.....	353
A.2—Strut-and-tie model design procedure	359
A.3—Strength of struts	360
A.4—Strength of ties	363
A.5—Strength of nodal zones	364
APPENDIX B—ALTERNATIVE PROVISIONS FOR REINFORCED AND PRESTRESSED CONCRETE FLEXURAL AND COMPRESSION MEMBERS.....	367
B.1—Scope	367
APPENDIX C—ALTERNATIVE LOAD AND STRENGTH REDUCTION FACTORS	373
C.1—General	373
C.2—Required strength.....	373
C.3—Design strength.....	374
APPENDIX D—ANCHORING TO CONCRETE.....	379
D.1—Definitions	379

D.6—Design requirements for shear loading	397
D.7—Interaction of tensile and shear forces	403
D.8—Required edge distances, spacings, and thicknesses to preclude splitting failure.....	403
D.9—Installation of anchors	405
APPENDIX E—STEEL REINFORCEMENT INFORMATION	407
COMMENTARY REFERENCES	409
INDEX.....	425

The ACI Building code and commentary are presented in a side-by-side column format, with code text placed in the left column and the corresponding commentary text aligned in the right column. To further distinguish the code from the commentary, the code has been printed in Helvetica, the same type face in which this paragraph is set.

This paragraph is set in Times Roman, and all portions of the text exclusive to the commentary are printed in this type face. Commentary section numbers are preceded by an “R” to further distinguish them from code section numbers.

Vertical lines in the margins indicate changes from the previous version. Changes to the notation and strictly editorial changes are not indicated with a vertical line.

INTRODUCTION

This commentary discusses some of the considerations of Committee 318 in developing the provisions contained in “Building Code Requirements for Structural Concrete (ACI 318-05),” hereinafter called the code or the 2005 code. Emphasis is given to the explanation of new or revised provisions that may be unfamiliar to code users. In addition, comments are included for some items contained in previous editions of the code to make the present commentary independent of the previous editions. Comments on specific provisions are made under the corresponding chapter and section numbers of the code.

The commentary is not intended to provide a complete historical background concerning the development of the ACI Building Code,* nor is it intended to provide a detailed résumé of the studies and research data reviewed by the committee in formulating the provisions of the code. However, references to some of the research data are provided for those who wish to study the background material in depth.

As the name implies, “Building Code Requirements for Structural Concrete” is meant to be used as part of a legally adopted building code and as such must differ in form and substance from documents that provide detailed specifications, recommended practice, complete design procedures, or design aids.

The code is intended to cover all buildings of the usual types, both large and small. Requirements more stringent than the code provisions may be desirable for unusual construction. The code and commentary cannot replace sound engineering knowledge, experience, and judgement.

A building code states only the minimum requirements necessary to provide for public health and safety. The code is based on this principle. For any structure, the owner or the structural designer may require the quality of materials and construction to be higher than the minimum requirements necessary to protect the public as stated in the code. However, lower standards are not permitted.

*For a history of the ACI Building Code see Kerekes, Frank, and Reid, Harold B., Jr., “Fifty Years of Development in Building Code Requirements for Reinforced Concrete,” *ACI JOURNAL, Proceedings* V. 50, No. 6, Feb. 1954, p. 441. For a discussion of code philosophy, see Siess, Chester P., “Research, Building Codes, and Engineering Practice,” *ACI JOURNAL, Proceedings* V. 56, No. 5, May 1960, p. 1105.

The commentary directs attention to other documents that provide suggestions for carrying out the requirements and intent of the code. However, those documents and the commentary are not a part of the code.

The code has no legal status unless it is adopted by the government bodies having the police power to regulate building design and construction. Where the code has not been adopted, it may serve as a reference to good practice even though it has no legal status.

The code provides a means of establishing minimum standards for acceptance of designs and construction by legally appointed building officials or their designated representatives. The code and commentary are not intended for use in settling disputes between the owner, engineer, architect, contractor, or their agents, subcontractors, material suppliers, or testing agencies. Therefore, the code cannot define the contract responsibility of each of the parties in usual construction. General references requiring compliance with the code in the project specifications should be avoided since the contractor is rarely in a position to accept responsibility for design details or construction requirements that depend on a detailed knowledge of the design. Design-build construction contractors, however, typically combine the design and construction responsibility. Generally, the drawings, specifications and contract documents should contain all of the necessary requirements to ensure compliance with the code. In part, this can be accomplished by reference to specific code sections in the project specifications. Other ACI publications, such as “Specifications for Structural Concrete (ACI 301)” are written specifically for use as contract documents for construction.

It is recommended to have testing and certification programs for the individual parties involved with the execution of work performed in accordance with this code. Available for this purpose are the plant certification programs of the Precast/Prestressed Concrete Institute, the Post-Tensioning Institute and the National Ready Mixed Concrete Association; the personnel certification programs of the American Concrete Institute and the Post-Tensioning Institute; and the Concrete Reinforcing Steel Institute’s Voluntary Certification Program for Fusion-Bonded Epoxy Coating Applicator Plants. In addition, “Standard Specification for Agencies Engaged in the Testing and/or Inspection of Materials Used in Construction” (ASTM E 329-03) specifies performance requirements for inspection and testing agencies.

Design reference materials illustrating applications of the code requirements may be found in the following documents. The design aids listed may be obtained from the sponsoring organization.

Design aids:

“ACI Design Handbook,” ACI Committee 340, Publication SP-17(97), American Concrete Institute, Farmington Hills, MI, 1997, 482 pp. (Provides tables and charts for design of eccentrically loaded columns by the Strength Design Method. Provides design aids for use in the engineering design and analysis of reinforced concrete slab systems carrying loads by two-way action. Design aids are also provided for the selection of slab thickness and for reinforcement required to control deformation and assure adequate shear and flexural strengths.)

“ACI Detailing Manual—2004,” ACI Committee 315, Publication SP-66(04), American Concrete Institute, Farmington Hills, MI, 2004, 212 pp. (Includes the standard, ACI 315-99, and report, ACI 315R-04. Provides recommended methods and standards for preparing engineering drawings, typical details, and drawings placing reinforcing steel in reinforced concrete structures. Separate sections define responsibilities of both engineer and reinforcing bar detailer.)

“Guide to Durable Concrete (ACI 201.2R-92),” ACI Committee 201, American Concrete Institute, Farmington Hills, MI, 1992, 41 pp. (Describes specific types of concrete deterioration. It contains a discussion of the mechanisms involved in deterioration and the recommended requirements for individual components of the concrete, quality considerations for concrete mixtures, construction procedures, and influences of the exposure environment. Section R4.4.1 discusses the difference in chloride-ion limits between ACI 201.2R-92 and the code.)

“Guide for the Design of Durable Parking Structures (362.1R-97 (Reapproved 2002)),” ACI Committee 362, American Concrete Institute, Farmington Hills, MI, 1997, 40 pp. (Summarizes practical information regarding design of parking structures for durability. It also includes information about design issues related to parking structure construction and maintenance.)

“CRSI Handbook,” Concrete Reinforcing Steel Institute, Schaumburg, IL, 9th Edition, 2002, 648 pp. (Provides tabulated designs for structural elements and slab systems. Design examples are provided to show the basis of and use of the load tables. Tabulated designs are given for beams; square, round and rectangular columns; one-way slabs; and one-way joist construction. The design tables for two-way slab systems include flat plates, flat slabs and waffle slabs. The chapters on foundations provide design tables for square footings, pile caps, drilled piers (caissons) and cantilevered

retaining walls. Other design aids are presented for crack control; and development of reinforcement and lap splices.)

“Reinforcement Anchorages and Splices,” Concrete Reinforcing Steel Institute, Schaumburg, IL, 4th Edition, 1997, 100 pp. (Provides accepted practices in splicing reinforcement. The use of lap splices, mechanical splices, and welded splices are described. Design data are presented for development and lap splicing of reinforcement.)

“Structural Welded Wire Reinforcement Manual of Standard Practice,” Wire Reinforcement Institute, Hartford, CT, 6th Edition, Apr. 2001, 38 pp. (Describes welded wire reinforcement material, gives nomenclature and wire size and weight tables. Lists specifications and properties and manufacturing limitations. Book has latest code requirements as code affects welded wire. Also gives development length and splice length tables. Manual contains customary units and soft metric units.)

“Structural Welded Wire Reinforcement Detailing Manual,” Wire Reinforcement Institute, Hartford, CT, 1994, 252 pp. (Updated with current technical fact sheets inserted.) The manual, in addition to including ACI 318 provisions and design aids, also includes: detailing guidance on welded wire reinforcement in one-way and two-way slabs; precast/prestressed concrete components; columns and beams; cast-in-place walls; and slabs-on-ground. In addition, there are tables to compare areas and spacings of high-strength welded wire with conventional reinforcing.

“Strength Design of Reinforced Concrete Columns,” Portland Cement Association, Skokie, IL, 1978, 48 pp. (Provides design tables of column strength in terms of load in kips versus moment in ft-kips for concrete strength of 5000 psi and Grade 60 reinforcement. Design examples are included. Note that the PCA design tables do not include the strength reduction factor ϕ in the tabulated values; M_u/ϕ and P_u/ϕ must be used when designing with this aid.

“PCI Design Handbook—Precast and Prestressed Concrete,” Precast/Prestressed Concrete Institute, Chicago, IL, 5th Edition, 1999, 630 pp. (Provides load tables for common industry products, and procedures for design and analysis of precast and prestressed elements and structures composed of these elements. Provides design aids and examples.)

“Design and Typical Details of Connections for Precast and Prestressed Concrete,” Precast/Prestressed Concrete Institute, Chicago, IL, 2nd Edition, 1988, 270 pp. (Updates available information on design of connections for both structural and architectural products, and presents a full spectrum of typical details. Provides design aids and examples.)

“Post-Tensioning Manual,” Post-Tensioning Institute, Phoenix, AZ, 5th Edition, 1990, 406 pp. (Provides comprehensive coverage of post-tensioning systems, specifications, and design aid construction concepts.)
