# BUILDING CODE REQUIREMENTS FOR STRUCTURAL CONCRETE (ACI 318-08) AND COMMENTARY

REPORTED BY ACI COMMITTEE 318

## *PREFACE*

The “Building Code Requirements for Structural Concrete” (“Code”) covers the materials, design, and construction of structural concrete used in buildings and where applicable in nonbuilding structures. The Code also covers the strength evaluation of existing concrete structures.

Among the subjects covered are: drawings and specifications; inspection; materials; durability requirements; concrete quality, mixing, and placing; formwork; embedded pipes; construction joints; reinforcement details; analysis and design; strength and serviceability; flexural and axial loads; shear and torsion; development and splices of reinforcement; slab systems; walls; footings; precast concrete; composite flexural members; prestressed concrete; shells and folded plate members; strength evaluation of existing structures; provisions for seismic design; structural plain concrete; strut-and-tie modeling in Appendix A; alternative design provisions in Appendix B; alternative load and strength reduction factors in Appendix C; and anchoring to concrete in Appendix D.

The quality and testing of materials used in construction are covered by reference to the appropriate ASTM standard specifications. Welding of reinforcement is covered by reference to the appropriate AWS standard.

Uses of the Code include adoption by reference in general building codes, and earlier editions have been widely used in this manner. The Code is written in a format that allows such reference without change to its language. Therefore, background details or suggestions for carrying out the requirements or intent of the Code portion cannot be included. The Commentary is provided for this purpose. Some of the considerations of the committee in developing the Code portion are discussed within the Commentary, with emphasis given to the explanation of new or revised provisions. Much of the research data referenced in preparing the Code is cited for the user desiring to study individual questions in greater detail. Other documents that provide suggestions for carrying out the requirements of the Code are also cited.

**Keywords:** admixtures; aggregates; anchorage (structural); beam-column frame; beams (supports); **building codes**; cements; cold weather construction; columns (supports); combined stress; composite construction (concrete and steel); composite construction (concrete to concrete); compressive strength; **concrete construction**; concrete slabs; **concretes**; construction joints; continuity (structural); contraction joints; cover; curing; deep beams; deflections; drawings; earthquake-resistant structures; embedded service ducts; flexural strength; floors; folded plates; footings; formwork (construction); frames; hot weather construction; inspection; isolation joints; joints (junctions); joists; lightweight concretes; load tests (structural); loads (forces); materials; mixing; mixture proportioning; modulus of elasticity; moments; pipe columns; pipes (tubing); placing; plain concrete; precast concrete; prestressed concrete; prestressing steels; quality control; **reinforced concrete**; reinforcing steels; roofs; serviceability; shear strength; shear walls; shells (structural forms); spans; specifications; splicing; strength; strength analysis; stresses; **structural analysis**; **structural concrete**; **structural design**; structural integrity; T-beams; torsion; walls; water; welded wire reinforcement.

ACI 318-08 was adopted as a standard of the American Concrete Institute November 2007 to supersede ACI 318-05 in accordance with the Institute’s standardization procedure and was published January 2008.

A complete metric companion to ACI 318 has been developed, 318M; therefore, no metric equivalents are included in this document.

ACI Committee Reports, Manuals, Guides, Standard Practices, and Commentaries are intended for guidance in planning, designing, executing, and inspecting construction. This Commentary is intended for the use of individuals who are competent to evaluate the significance and limitations of its content and recommendations and who will accept responsibility for the application of the material it contains. The American Concrete Institute disclaims any and all responsibility for the stated principles. The Institute

shall not be liable for any loss or damage arising therefrom. Reference to this Commentary shall not be made in contract documents. If items found in this Commentary are desired by the licensed design professional to be a part of the contract documents, they shall be restated and incorporated in mandatory language.

# CONTENTS

<b>INTRODUCTION .....</b>	<b>7</b>
<b>CHAPTER 1—GENERAL REQUIREMENTS .....</b>	<b>9</b>
1.1—Scope .....	9
1.2—Drawings and specifications.....	13
1.3—Inspection.....	14
1.4—Approval of special systems of design or construction .....	17
<b>CHAPTER 2—NOTATION AND DEFINITIONS .....</b>	<b>19</b>
2.1—Code notation.....	19
2.2—Definitions .....	28
<b>CHAPTER 3—MATERIALS.....</b>	<b>41</b>
3.1—Tests of materials.....	41
3.2—Cementitious materials.....	41
3.3—Aggregates.....	42
3.4—Water.....	42
3.5—Steel reinforcement .....	43
3.6—Admixtures .....	49
3.7—Storage of materials.....	49
3.8—Referenced standards.....	49
<b>CHAPTER 4—DURABILITY REQUIREMENTS .....</b>	<b>55</b>
4.1—General .....	55
4.2—Exposure categories and classes .....	55
4.3—Requirements for concrete mixtures .....	57
4.4—Additional requirements for freezing-and-thawing exposure.....	60
4.5—Alternative cementitious materials for sulfate exposure.....	61
<b>CHAPTER 5—CONCRETE QUALITY, MIXING, AND PLACING .....</b>	<b>63</b>
5.1—General .....	63
5.2—Selection of concrete proportions.....	64
5.3—Proportioning on the basis of field experience or trial mixtures, or both .....	64
5.4—Proportioning without field experience or trial mixtures.....	69
5.5—Average compressive strength reduction.....	69
5.6—Evaluation and acceptance of concrete .....	70
5.7—Preparation of equipment and place of deposit.....	75
5.8—Mixing.....	76
5.9—Conveying .....	76
5.10—Depositing .....	77
5.11—Curing.....	77
5.12—Cold weather requirements .....	78
5.13—Hot weather requirements.....	79
<b>CHAPTER 6—FORMWORK, EMBEDMENTS, AND CONSTRUCTION JOINTS .....</b>	<b>81</b>
6.1—Design of formwork .....	81
6.2—Removal of forms, shores, and reshoring .....	81
6.3—Embedments in concrete .....	83
6.4—Construction joints.....	84
<b>CHAPTER 7—DETAILS OF REINFORCEMENT .....</b>	<b>87</b>
7.1—Standard hooks .....	87
7.2—Minimum bend diameters.....	87
7.3—Bending .....	88
7.4—Surface conditions of reinforcement.....	88
7.5—Placing reinforcement .....	89

7.6—Spacing limits for reinforcement .....	90
7.7—Concrete protection for reinforcement .....	91
7.8—Reinforcement details for columns .....	94
7.9—Connections.....	95
7.10—Lateral reinforcement for compression members .....	96
7.11—Lateral reinforcement for flexural members .....	98
7.12—Shrinkage and temperature reinforcement .....	98
7.13—Requirements for structural integrity.....	100
<b>CHAPTER 8—ANALYSIS AND DESIGN—GENERAL CONSIDERATIONS .....</b>	<b>103</b>
8.1—Design methods.....	103
8.2—Loading.....	103
8.3—Methods of analysis.....	104
8.4—Redistribution of moments in continuous flexural members .....	105
8.5—Modulus of elasticity .....	107
8.6—Lightweight concrete.....	107
8.7—Stiffness.....	108
8.8—Effective stiffness to determine lateral deflections.....	108
8.9—Span length .....	109
8.10—Columns .....	110
8.11—Arrangement of live load.....	110
8.12—T-beam construction.....	111
8.13—Joist construction.....	112
8.14—Separate floor finish.....	113
<b>CHAPTER 9—STRENGTH AND SERVICEABILITY REQUIREMENTS.....</b>	<b>115</b>
9.1—General.....	115
9.2—Required strength .....	115
9.3—Design strength .....	117
9.4—Design strength for reinforcement .....	121
9.5—Control of deflections.....	121
<b>CHAPTER 10—FLEXURE AND AXIAL LOADS.....</b>	<b>129</b>
10.1—Scope .....	129
10.2—Design assumptions .....	129
10.3—General principles and requirements.....	131
10.4—Distance between lateral supports of flexural members.....	134
10.5—Minimum reinforcement of flexural members .....	134
10.6—Distribution of flexural reinforcement in beams and one-way slabs .....	135
10.7—Deep beams .....	137
10.8—Design dimensions for compression members.....	138
10.9—Limits for reinforcement of compression members.....	138
10.10—Slenderness effects in compression members.....	140
10.11—Axially loaded members supporting slab system.....	148
10.12—Transmission of column loads through floor system .....	148
10.13—Composite compression members .....	149
10.14—Bearing strength .....	152
<b>CHAPTER 11—SHEAR AND TORSION .....</b>	<b>155</b>
11.1—Shear strength.....	155
11.2—Shear strength provided by concrete for nonprestressed members.....	158
11.3—Shear strength provided by concrete for prestressed members.....	160
11.4—Shear strength provided by shear reinforcement .....	163
11.5—Design for torsion .....	168
11.6—Shear-friction .....	180
11.7—Deep beams .....	183
11.8—Provisions for brackets and corbels.....	184
11.9—Provisions for walls.....	188
11.10—Transfer of moments to columns.....	190
11.11—Provisions for slabs and footings.....	190

<b>CHAPTER 12—DEVELOPMENT AND SPLICES OF REINFORCEMENT .....</b>	<b>203</b>
12.1—Development of reinforcement—General.....	203
12.2—Development of deformed bars and deformed wire in tension.....	204
12.3—Development of deformed bars and deformed wire in compression.....	206
12.4—Development of bundled bars .....	207
12.5—Development of standard hooks in tension.....	207
12.6—Development of headed and mechanically anchored deformed bars in tension.....	210
12.7—Development of welded deformed wire reinforcement in tension .....	212
12.8—Development of welded plain wire reinforcement in tension .....	213
12.9—Development of prestressing strand .....	214
12.10—Development of flexural reinforcement—General .....	216
12.11—Development of positive moment reinforcement.....	218
12.12—Development of negative moment reinforcement .....	220
12.13—Development of web reinforcement .....	220
12.14—Splices of reinforcement—General .....	224
12.15—Splices of deformed bars and deformed wire in tension .....	225
12.16—Splices of deformed bars in compression .....	227
12.17—Splice requirements for columns.....	228
12.18—Splices of welded deformed wire reinforcement in tension .....	230
12.19—Splices of welded plain wire reinforcement.....	231
 <b>CHAPTER 13—TWO-WAY SLAB SYSTEMS.....</b>	 <b>233</b>
13.1—Scope .....	233
13.2—General .....	234
13.3—Slab reinforcement.....	235
13.4—Openings in slab systems .....	238
13.5—Design procedures.....	238
13.6—Direct design method .....	241
13.7—Equivalent frame method .....	248
 <b>CHAPTER 14—WALLS .....</b>	 <b>253</b>
14.1—Scope .....	253
14.2—General .....	253
14.3—Minimum reinforcement.....	254
14.4—Walls designed as compression members.....	255
14.5—Empirical design method.....	255
14.6—Nonbearing walls.....	256
14.7—Walls as grade beams.....	256
14.8—Alternative design of slender walls.....	257
 <b>CHAPTER 15—FOOTINGS .....</b>	 <b>261</b>
15.1—Scope .....	261
15.2—Loads and reactions.....	261
15.3—Footings supporting circular or regular polygon-shaped columns or pedestals .....	262
15.4—Moment in footings.....	262
15.5—Shear in footings .....	263
15.6—Development of reinforcement in footings.....	264
15.7—Minimum footing depth .....	264
15.8—Transfer of force at base of column, wall, or reinforced pedestal .....	264
15.9—Sloped or stepped footings .....	266
15.10—Combined footings and mats .....	267
 <b>CHAPTER 16—PRECAST CONCRETE .....</b>	 <b>269</b>
16.1—Scope .....	269
16.2—General .....	269
16.3—Distribution of forces among members .....	270
16.4—Member design .....	270
16.5—Structural integrity .....	271
16.6—Connection and bearing design .....	273

16.7—Items embedded after concrete placement .....	275
16.8—Marking and identification .....	275
16.9—Handling .....	275
16.10—Strength evaluation of precast construction .....	275

<b>COMMENTARY REFERENCES .....</b>	<b>449</b>
<b>INDEX.....</b>	<b>467</b>

The ACI Building Code Requirements for Structural Concrete (“Code”) and Commentary are presented in a side-by-side column format, with Code text placed in the left column and the corresponding Commentary text aligned in the right column. To further distinguish the Code from the Commentary, the Code has been printed in Helvetica, the same type face in which this paragraph is set.

This paragraph is set in Times Roman, and all portions of the text exclusive to the Commentary are printed in this type face. Commentary section numbers are preceded by an “R” to further distinguish them from Code section numbers.

Except for Chapters 4 and 21, substantive changes from 318-05 are indicated with vertical lines in the margin (editorial changes not indicated). Changes to the provisions of Chapters 4 and 21 are not indicated by a vertical line because the provisions were renumbered for this edition.

## INTRODUCTION

This Commentary discusses some of the considerations of Committee 318 in developing the provisions contained in “Building Code Requirements for Structural Concrete (ACI 318-08),” hereinafter called the Code or the 2008 Code. Emphasis is given to the explanation of new or revised provisions that may be unfamiliar to Code users. In addition, comments are included for some items contained in previous editions of the Code to make the present commentary independent of the previous editions. Comments on specific provisions are made under the corresponding chapter and section numbers of the Code.

The Commentary is not intended to provide a complete historical background concerning the development of the Code,\* nor is it intended to provide a detailed résumé of the studies and research data reviewed by the committee in formulating the provisions of the Code. However, references to some of the research data are provided for those who wish to study the background material in depth.

As the name implies, “Building Code Requirements for Structural Concrete” is meant to be used as part of a legally adopted building code and as such must differ in form and substance from documents that provide detailed specifications, recommended practice, complete design procedures, or design aids.

The Code is intended to cover all buildings of the usual types, both large and small. Requirements more stringent than the Code provisions may be desirable for unusual construction. The Code and Commentary cannot replace sound engineering knowledge, experience, and judgment.

A building code states only the minimum requirements necessary to provide for public health and safety. The Code is based on this principle. For any structure, the owner or the licensed design professional may require the quality of materials and construction to be higher than the minimum

requirements necessary to protect the public as stated in the Code. However, lower standards are not permitted.

The Commentary directs attention to other documents that provide suggestions for carrying out the requirements and intent of the Code. However, those documents and the Commentary are not a part of the Code.

The Code has no legal status unless it is adopted by the government bodies having the police power to regulate building design and construction. Where the Code has not been adopted, it may serve as a reference to good practice even though it has no legal status.

The Code provides a means of establishing minimum standards for acceptance of designs and construction by legally appointed building officials or their designated representatives. The Code and Commentary are not intended for use in settling disputes between the owner, engineer, architect, contractor, or their agents, subcontractors, material suppliers, or testing agencies. Therefore, the Code cannot define the contract responsibility of each of the parties in usual construction. General references requiring compliance with the Code in the project specifications should be avoided since the contractor is rarely in a position to accept responsibility for design details or construction requirements that depend on a detailed knowledge of the design. Design-build construction contractors, however, typically combine the design and construction responsibility. Generally, the drawings, specifications, and contract documents should contain all of the necessary requirements to ensure compliance with the Code. In part, this can be accomplished by reference to specific Code sections in the project specifications. Other ACI publications, such as “Specifications for Structural Concrete (ACI 301)” are written specifically for use as contract documents for construction.

It is recommended to have testing and certification programs for the individual parties involved with the execution of work performed in accordance with this Code. Available for this purpose are the plant certification programs of the Precast/Prestressed Concrete Institute, the Post-Tensioning Institute, and the National Ready Mixed Concrete Association; the personnel certification programs of the American Concrete Institute and the Post-Tensioning Institute; and the Concrete Reinforcing Steel Institute’s Voluntary Certification

\*For a history of the ACI Building Code see Kerekes, F., and Reid, H. B., Jr., “Fifty Years of Development in Building Code Requirements for Reinforced Concrete,” *ACI JOURNAL, Proceedings* V. 50, No. 6, Feb. 1954, p. 441. For a discussion of code philosophy, see Siess, C. P., “Research, Building Codes, and Engineering Practice,” *ACI JOURNAL, Proceedings* V. 56, No. 5, May 1960, p. 1105.

Program for Fusion-Bonded Epoxy Coating Applicator Plants. In addition, “Standard Specification for Agencies Engaged in Construction Inspecting and/or Testing” (ASTM E329-06a) specifies performance requirements for inspection and testing agencies.

Design reference materials illustrating applications of the Code requirements may be found in the following documents. The design aids listed may be obtained from the sponsoring organization.

#### Design aids:

“**ACI Design Handbook,**” Publication SP-17(97), American Concrete Institute, Farmington Hills, MI, 1997, 482 pp. (This provides tables and charts for design of eccentrically loaded columns by the Strength Design Method of the 1995 Code. Provides design aids for use in the engineering design and analysis of reinforced concrete slab systems carrying loads by two-way action. Design aids are also provided for the selection of slab thickness and for reinforcement required to control deformation and assure adequate shear and flexural strengths.)

“**ACI Detailing Manual—2004,**” ACI Committee 315, Publication SP-66(04), American Concrete Institute, Farmington Hills, MI, 2004, 212 pp. (Includes the standard, ACI 315-99, and report, ACI 315R-04. Provides recommended methods and standards for preparing engineering drawings, typical details, and drawings placing reinforcing steel in reinforced concrete structures. Separate sections define responsibilities of both engineer and reinforcing bar detailer.)

“**Guide to Durable Concrete (ACI 201.2R-01),**” ACI Committee 201, American Concrete Institute, Farmington Hills, MI, 2001, 41 pp. (This describes specific types of concrete deterioration. It contains a discussion of the mechanisms involved in deterioration and the recommended requirements for individual components of the concrete, quality considerations for concrete mixtures, construction procedures, and influences of the exposure environment.

“**Guide for the Design of Durable Parking Structures (362.1R-97 (Reapproved 2002)),**” ACI Committee 362, American Concrete Institute, Farmington Hills, MI, 1997, 33 pp. (This summarizes practical information regarding design of parking structures for durability. It also includes information about design issues related to parking structure construction and maintenance.)

“**CRSI Handbook,**” Concrete Reinforcing Steel Institute, Schaumburg, IL, 9th Edition, 2002, 648 pp. (This provides tabulated designs for structural elements and slab systems. Design examples are provided to show the basis of and use of the load tables. Tabulated designs are given for beams; square, round, and rectangular columns; one-way slabs; and one-way joist construction. The design tables for two-way slab systems include flat plates, flat slabs, and waffle slabs.

The chapters on foundations provide design tables for square footings, pile caps, drilled piers (caissons), and cantilevered retaining walls. Other design aids are presented for crack control; and development of reinforcement and lap splices.)

“**Reinforcement Anchorages and Splices,**” Concrete Reinforcing Steel Institute, Schaumburg, IL, 4th Edition, 1997, 100 pp. (This provides accepted practices in splicing reinforcement. The use of lap splices, mechanical splices, and welded splices are described. Design data are presented for development and lap splicing of reinforcement.)

“**Structural Welded Wire Reinforcement Manual of Standard Practice,**” Wire Reinforcement Institute, Hartford, CT, 6th Edition, Apr. 2001, 38 pp. (This describes welded wire reinforcement material, gives nomenclature and wire size and weight tables. Lists specifications and properties and manufacturing limitations. Book has latest code requirements as code affects welded wire. Also gives development length and splice length tables. Manual contains customary units and soft metric units.)

“**Structural Welded Wire Reinforcement Detailing Manual,**” Wire Reinforcement Institute, Hartford, CT, 1994, 252 pp. (The manual, in addition to including ACI 318 provisions and design aids, also includes: detailing guidance on welded wire reinforcement in one-way and two-way slabs; precast/prestressed concrete components; columns and beams; cast-in-place walls; and slabs-on-ground. In addition, there are tables to compare areas and spacings of high-strength welded wire with conventional reinforcing.)

“**Strength Design of Reinforced Concrete Columns,**” Portland Cement Association, Skokie, IL, 1978, 48 pp. (This provides design tables of column strength in terms of load in kips versus moment in ft-kips for concrete strength of 5000 psi and Grade 60 reinforcement. Design examples are included. Note that the PCA design tables do not include the strength reduction factor  $\phi$  in the tabulated values;  $M_u/\phi$  and  $P_u/\phi$  must be used when designing with this aid.)

“**PCI Design Handbook—Precast and Prestressed Concrete,**” Precast/Prestressed Concrete Institute, Chicago, IL, 6th Edition, 2004, 736 pp. (This provides load tables for common industry products, and procedures for design and analysis of precast and prestressed elements and structures composed of these elements. Provides design aids and examples.)

“**Design and Typical Details of Connections for Precast and Prestressed Concrete,**” Precast/Prestressed Concrete Institute, Chicago, IL, 2nd Edition, 1988, 270 pp. (This updates available information on design of connections for both structural and architectural products, and presents a full spectrum of typical details. This provides design aids and examples.)

“**Post-Tensioning Manual,**” Post-Tensioning Institute, Phoenix, AZ, 6th Edition, 2006, 354 pp. (This provides comprehensive coverage of post-tensioning systems, specifications, design aids, and construction concepts.)
