

AGENDA – ACI 440-D
Research, Development, and Applications
Sunday, November 2, 2008, St. Louis
1:00 – 2:30 pm
Room = Landmark 4

1. Call to order, introductions, announcements, and previous minutes from LA
2. **Presentations on Research, Development, and Applications**
(Note: this is the main agenda item for this committee, the other items listed below will be considered only as time permits.)

At the previous ACI 440 meeting, the procedure commenced that 440-D would serve to provide an opportunity for all of 440 members to give presentations on new areas of development for 440 members, their companies, or their research. These presentations are intended to be of a service to all to show progress examples of field applications, new products, new research in progress, and other areas of interest to the members of 440. The topics are limited to those within the scope of ACI 440.

This new format is being provided since members have had difficulty finding opportunities to give presentations of their work in progress to their colleagues on ACI 440. Thus, the name of ACI 440-D is being changed (to reflect this changed format) to “Research, Development, and Applications”.

Procedure: Please submit your presentations to Max Porter via an e-mail attachment to mporter@iastate.edu at least 1 day before the meeting, or give to Kent Harries or Max Porter prior to the meeting, if you have communicated to the co-chairs ahead of time.

Presentation format: PowerPoint slides with a presentation time limit of approximately 10 minutes (we may have to shorten the allowed time, depending upon the number of presentation requests received).

3. Future activities of 440-D
 - 3a. Criteria for presentations of FRP developments
 - 3b. Select some preliminary topics and presenters for the next meeting.
 - 3c. Follow-up activities based on Previous Minutes from LA, and:

- Need for additional coordinated efforts in research:
- coordinated activities specifically aimed at environmental/durability issues – distributed “National infrastructure program” - NEES-model of collaborators
- coordination with other groups

3d. Need for “round-robin” testing activities in support of 440L and 440K/ASTM D30.

4. Other items

5. Next meeting

6. Adjourn
