Emerging Technologies in the Concrete Industry

ACI Fall 2012 Convention
October 21 – 24, Toronto, ON

ACI
WEB SESSIONS

Dr. Markus Wernli is a senior project manager at BergerABAM. He received his Ph.D. from the University of California in San Diego on applications of advanced composite materials for construction. During his 18 years of experience in civil engineering he has been focusing on the development of new technologies for the construction industry. Dr. Wernli has been involved in the development of advanced composite material applications; large floating concrete structures for ship berthing, storage, renewable energy, and military facilities; large cryogenic storage tanks made of precast concrete; accelerated bridge construction technologies in seismic regions; and tall concrete wind turbine towers. Dr. Wernli is the champion for the Accelerated Technology Implementation team for concrete wind turbine towers of the Strategic Development Council of the ACI Foundation. He shares a Robert J. Lyman Award from PCI and an ACI Construction Practice Award for his efforts on advancing the concrete industry.

Where the Wind Blows

Wind Power Classification

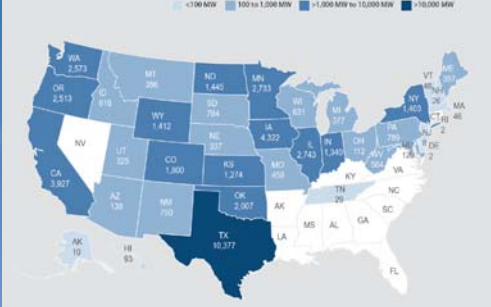

Class	Annual Average Wind Speed (m/s)	Annual Average Wind Speed (mi/h)	Annual Energy Potential (kWh/m ² /yr)	Annual Energy Potential (kWh/acre/yr)
1	3.0 - 3.9	6.7 - 8.7	163 - 214	1,100 - 1,400
2	4.0 - 4.9	9.0 - 10.8	215 - 284	1,400 - 1,850
3	5.0 - 5.9	11.2 - 13.0	285 - 376	1,850 - 2,450
4	6.0 - 6.9	13.4 - 15.3	377 - 494	2,450 - 3,250
5	7.0 - 7.9	15.7 - 17.6	495 - 644	3,250 - 4,250
6	8.0 - 8.9	18.0 - 19.9	645 - 844	4,250 - 5,550
7	9.0 - 9.9	20.3 - 22.2	845 - 1,104	5,550 - 7,250
8	10.0 - 10.9	22.6 - 24.5	1,105 - 1,444	7,250 - 9,450

This map shows the wind resource data used by the NREL for the 20% Wind Scenario. It is a combination of high resolution and low resolution datasets provided by the NREL and other organizations. The data was corrected to account for terrain effects to the extent possible due to data gaps or inconsistent data. In many areas, the wind resource on this map is likely enhanced to better show the distribution on ridge crests and other features.

AWEA Fourth Quarter 2011 Market Report

BergerABAM

The Strategic Goal

BergerABAM

How to Build a New Industry

On April 25, 2012, the Strategic Development Council of the ACI Foundation identified Concrete for Wind Turbine Towers as an Industry Critical Technology

as an Industry Critical Technology identified Concrete for Wind Turbine Towers Development Council of the ACI Foundation

BergerABAM

Strategic Goal for the SDC

1. Concrete shall be a widespread used material for the construction of towers for wind turbines.
 - Competitive concrete tower component market
 - Market for technology providers selling/licensing proprietary tower system
2. The market condition shall foster innovation, fair competition, and an environment that leads to safe and reliable concrete towers.
 - Protection of public domain knowledge
 - Protection of proprietary systems
 - Providing a procedure for fast technology deployment
 - Certification of concrete contractors and precasters

BergerABAM

Benefits to the Concrete and Construction Industry

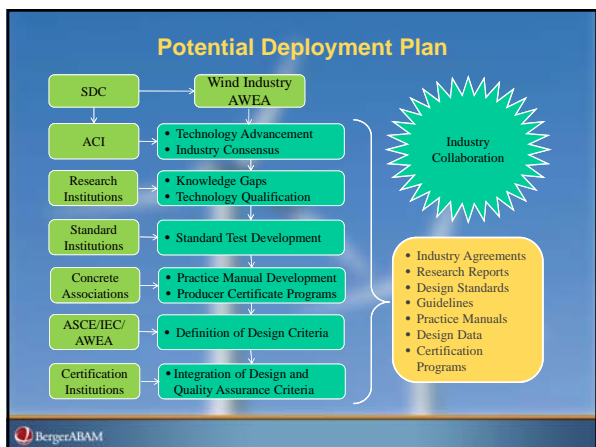

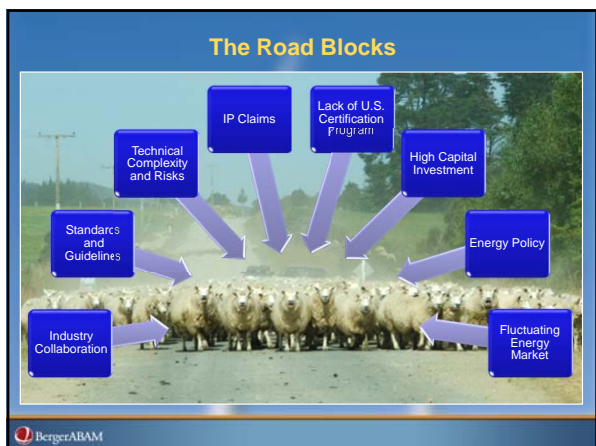

BergerABAM

Benefits to Other Stakeholders

BergerABAM

The Road Blocks

BergerABAM

- ### Initial Output
- State-of-the-Art and Risk Analysis Report for Turbine Towers Made of Concrete (FIB-TG 6.14)
 - Definition of Concrete Tower Supply Chain (ACI/AWEA)
 - Business Case for Turbine Towers Made of Concrete (ACI/PCI, NREL)
 - Joint Industry Agreements on Intellectual Property (SDC/AWEA)
- BergerABAM

- ### Guidelines and Standards
- Guideline to the Design of Concrete and Concrete/Steel Hybrid Wind Turbine Towers with Sample Details and Design Examples (ACI)
 - Several ASTM standards to address the heightened requirements on fatigue performance of construction materials (ASTM)
 - Design Criteria and Load Assumptions for Wind Turbine Towers (ASCE/ICE/AWEA)
 - Guideline to the Qualification of Concrete Components for Wind Turbine Towers (NIST, ICC-ES)
 - Guideline to the Dynamic Characterization of Concrete Towers for Wind Turbines (NIST)
- BergerABAM

- ### Practice Manuals
- Manual of Practice for Standard Detailing for Wind Turbine Towers Made with Precast Concrete Elements (PCI)
 - Manual of Practice for the Erection of Wind Turbine Towers Made with Precast Concrete Elements (PCI)
 - Manual of Practice for the Construction of Cast-in-Place Concrete Towers for Wind Turbines (NRMCA)
 - Quality Control Manual for the Construction of Concrete Towers for Wind Turbines (ACI)
 - Quality Control Manual for the Fabrication and Erection of Wind Turbine Towers Made with Precast Concrete Elements (PCI)
- BergerABAM

Industry Certification Programs

- Certification program for tower component precast plants (PCI)
- Certification program for tower concrete contractors (NRMCA)
- Certification program for concrete tower component erectors (PCI)
- Certification programs for proprietary components and details (ICC-ES)

Conclusions

There are currently about 3000 turbines erected on steel towers annually, a \$750 million industry for tower manufacturing alone

The concrete industry has to take a joint initiative if it wants to become a bigger contributor to the wind turbine tower market
