## Decorative Concrete Products

### KickStart

Curecrete Distribution, Inc.'s KickStart™ Concrete Clarity Enhancer achieves accelerated and enhanced concrete clarity in fewer grinding and polishing steps. It can be used on hard steel-troweled concrete surfaces, whether new or existing. The single-component liquid works immediately, creating a slurry that speeds the progression through metal, hybrid, and resin diamond pads and can be easily cleaned from pads and equipment. KickStart is designed to work in combination with CreteClean Plus with Scar Guard™ and is only intended for use on floors using the RetroPlate® System or Ashford Formula.™

### CPS Rover

The Concrete Polishing Solutions (CPS) Rover is a zero-turn, propane-fueled grinder with a 32 in. (813 mm) path. From the operator's seat, there is clear visibility of all points on the machine. An onboard generator powers adjustable lighting and an electric head lift for tooling changes and transport, and an onboard water sprayer allows for convenient wet grinding. CPS Rover weighs 1115 lb (506 kg), with 760 lb (3.4 kN) of grinding force. The engine has a variable speed of up to 3600 rotations per minute.

### LANXESS Bayferrox and Colortherm

LANXESS' line of Bayferrox iron oxide pigments and Colortherm-brand chrome oxide pigments provide colorful and attractive finishes. The colors range from yellow to red, green, and brown all the way to black. More than 100 different shades of the individual colors are available. With these products, safe and lasting design effects can be achieved in cast-in-place concrete, prefabricated concrete components, concrete roofing tiles, and paving blocks.

### INDUROSHINE

W. R. MEADOWS' INDUROSHINE, a polished concrete flooring system, combines a concrete grinding and polishing system with W. R. MEADOWS LIQUI-HARD 0.0 g/L VOC-compliant concrete densifier and sealer. This combination creates an aesthetically pleasing finish that does not require expensive coatings or frequent maintenance. The system is recommended for use wherever a dense, wear-resistant, low-maintenance floor is desired. The system allows users to specify the polished densified surface (PDS): PDS-1 is a satin finish that will reflect images from side lighting; PDS-2 is a semi-gloss finish that will reflect overhead and side images from 35 to 45 ft (10 to 14 m) with increased light reflectivity; and PDS-3 is a high-gloss finish that will look wet and show mirror-like reflections of side and overhead images.

## Surecrete Decorative Concrete Designs

SureCrete Design Products include concrete countertop mixtures, concrete overlays, concrete stains, concrete paints, and three-dimensional (3-D) epoxy metallic floor coatings. Users can create surfaces with different designs and textures using thin concrete overlays, coatings, or casting. For decorative concrete counter tops, users only need one bag of concrete mixture and 1 gal. (4 L) of specially formulated liquid activator to create a smooth finished surface. SureCrete-tailored concrete paints are used for exterior and interior applications, provide a nearly unlimited color palette, and include tinted epoxies. An epoxy flake system can be used to create a multi-color thin texture, or an epoxy metallic system can be used to create a smooth, glasslike surface with 3-D looking color movement.

## Sakrete Concrete Countertop Mix

Sakrete Concrete Countertop Mix can be manipulated to meet different design aesthetics. It can be formed on-site to create the exact shape and thickness desired. The Concrete Countertop Mix can also be dyed any color to match the interior design and décor. Forms can be stripped about 24 hours after placement. After curing, the surface should be properly sealed using a food-safe product.

## Textural Designs 3-D Sculptural Wall Tile Collection

Textural Designs, a design company specializing in the production of sculptural three-dimensional (3-D) wall panels for indoor and outdoor environments, introduced a sculptural wall tile collection. The collection includes a variety of eco-friendly, fire-retardant materials. Textural Designs' concrete tiles include: High-Performance Concrete (HPC) 3-D Tiles—a proprietary concrete composition of exceptional durability, HPC tiles add texture, richness, and dimension to walls; Ultra High-Performance Concrete (UHPC) Dimensional Panels—comprised of a variety of textures with smooth surfaces, UHPC panels are ideal for rejuvenating indoor and outdoor surfaces; and Thin Cement Surfaces (TCS) Panels—100% authentic, high-performance concrete, this peel-and-stick wall covering works on flat or curved surfaces and can be used to create original and modern interior spaces.

## Concrete Craft Vertical Concrete Application

Concrete Craft™ added vertical concrete application to its decorative, stamped, and stained concrete services. Decorative concrete designs replicating the rich look of natural stone can now be applied to exterior privacy walls, indoor and outdoor fireplaces, and bathroom shower stalls. The vertical concrete overlay can be applied over wood, drywall, brick, and concrete. The high-strength, flexible-polymer overlay product makes 100% contact on vertical surfaces, eliminating voids and gaps.
